Application Development

IT Security Services

IoT

Communication & Collaboration

Customer Relations' Services

Local Network Services

IT devices

## Data Center and Cloud

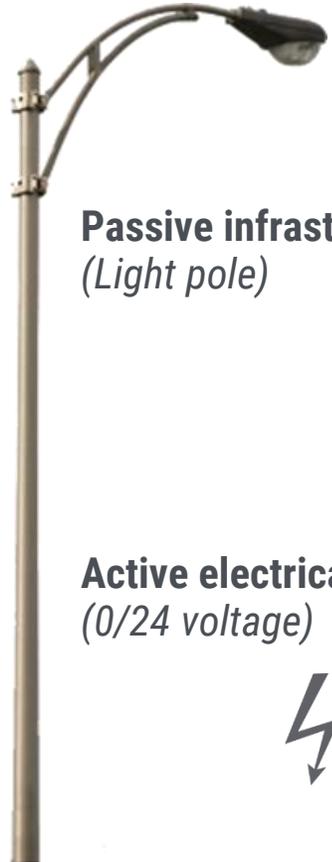

Data Center Services

Cloud Services

# Smart City pilot – smart light pole, Budaörs (Hungary)

## Using existing infrastructure

**Passive infrastructure**  
*(Light pole)*

**Active electrical network**  
*(0/24 voltage)*

## Potential smart applications

**Managed public lighting**

**EV charger applied to the public lighting system**

**Integrated wifi & camera**

**Additional sensors** *(Uplink)*

**Collection & analysis of data**

## Data for (local) governmental & customer / end user usage

**Big data & analytics** to support urban development (urban infrastructure, utilities, services)

**End user applications** according to the needs of the inhabitants

# (Smart) City operation is based on cooperation

Effective smart city development needs a new approach – especially in settlements < 35 k inhabitants

Smart city is more a **social, communal development** model

**Technology** should **not** be **the primer** driving force behind development

Companies should take a more **consultative presence**

Human relations, communities can bring change in the life of the city - technology should serve to this end

Technology, innovations should support smaller, disadvantaged communities to get **equal access to services**

Smaller settlements need to cooperate – **regional cooperation** is a way forward (e.g. transportation, tourism, certain social services)

Basis of **viable business models** is to find the mutually advantageous forms of cooperation

(Smart) city operation is

- about collaboration, involvement, and
- Cooperation, which takes into account communal aspects, participation and responsibility
- above concrete technological solutions.

# 3 steps to effectively operate a smart city – simplified

Monitoring – feedback and evaluation to those involved

Monitoring

Planning

Strategic planning

Financing

Developing smart financing / business models

# Recommendations

---

Developing / using tools and methodologies to **understand local needs**

**Awareness building** for all actors – towards behavioral transformation

**Identifying stumbling blocks** (legal, financial, behavioral, etc.), **which hinder regional cooperation** – including cross border cooperation - for better realization

Create a **fora to share best, financially viable practices** – among V4 countries

(v4) **projects to explore and foster regional**, cross border cooperation for communities

**Thank you for your attention**
